

The **footnotehyper** package

JEAN-FRAN OIS BURNOL

jfbu (at) free (dot) fr

Package version: v1.1a (2019/11/07)

From source file footnotehyper.dtx of Time-stamp: <07-11-2019 at 17:09:56 CET>.

Abstract

The footnote package by MARK WOODING (1997/01/28 1.13) allows to gather footnotes (`\begin{savenotes}`) and later insert them (after `\end{savenotes}`) at the bottom of the page, even if the intervening material consists of tabulars, minipages or framed contents for example. One can also use the `\savenotes/\spewnotes` syntax.

Also, `footnote.sty` provides a `footnote` environment which allows to insert verbatim material.

Earlier releases of the present **footnotehyper** package added patches for `hyperref` compatibility and some bugfixes, addressing in particular the incompatibility with `color/xcolor`, and with `babel-frenchb`, and also fixing the `footnote` environment with optional argument `[NUM]`. Since v0.99 all macros are defined internally and the `footnote` package is not loaded at all.

The same user interface is kept. Since v1.0 it is possible to use **footnotehyper** also in absence of `hyperref` or when the latter is loaded with its `hyperfootnotes=false` option. The order of loading of **footnotehyper** and `hyperref` is inconsequential.

2 Usage

Since v0.99, **footnotehyper** does not load package `footnote.sty`¹ anymore, and is even incompatible with it at it uses the same user interface.

Since v1.0, **footnotehyper** is usable also in absence of `hyperref` or when the latter was passed `hyperfootnotes=false` option.

Version v1.1 fixes a bug which arose when `savenotes` environment was used *inside* a `minipage`: footnotes were disappearing!² See related remarks at end of [section 3](#).

The package thus provides:

- a `savenotes` environment which re-routes footnotes and delivers them at the end (there is also the `\savenotes/\spewnotes` syntax; it does create a group like the environment),
- `footnote` and `footnotetext` environments to allow footnotes with verbatim material.

But the constructability of the `footnote/footnotetext` environments depends on how `\@makefntext` has been customized by the class or other packages; a warning is issued if the situation appears to be desperate.³

It should be recalled that in case of `\footnotemark[N]` and `\footnotetext[N]{...}` mark-up `hyperref` creates no hyperlink. This is not changed by **footnotehyper** and applies also to the `\begin{footnotetext}[N]` case. Without optional argument the link is created, and the link is created also for `\footnote[N]` or `\begin{footnote}[N]`.

This package does not handle especially floating environments, except that one can always surround them in the source in a `savenotes` environment and one knows that the footnotes will be delivered at the `\end{savenotes}...` which may well be one page earlier than the actual location of the floating material in the produced document !

Environments typesetting multiple times their contents are the most hostile to footnotes. Currently, **footnotehyper** only handles especially the `amsmath` environments (as in `footnote.sty`.)

Finally there is a `\makesavenoteenv` command which takes as argument an environment name and patches it to do the `\savenotes/\spewnotes` automatically.⁴ It is safer to avoid it, as one never knows what happens with such patches: for example the [H] specifier provided by the `float` package overwrites the `\end{table}` definition during the execution of `\begin{table}...`!

Inside ⁵ a	tabular ⁶
-----------------------	----------------------

An example:

```
\begin{Savenotes}
\begin{framed}
```

¹<http://ctan.org/pkg/footnote>

²Thanks to François Pantigny for reporting the bug. A later suggestion of the same is to let the package do nothing under Beamer class, and this is what v1.1a 2019/11/07 does.

³original `footnote.sty` could end up in a low level T_EX error.

⁴For the record the syntax is either `\makesavenoteenv{foo}` which patches environment `foo` or `\makesavenoteenv[bar]{foo}` which defines environment `bar` as this patched version of `foo`.

2 Usage

```
Please refer to the documentation of the |footnote| package.%  
\footnote{\url{http://ctan.org/pkg/footnote}}
```

```
Particularly you may check its |savenotes| environment.%  
\footnote{It doesn't bring any  
feature to especially handle the issues related to footnotes in floating  
environments, though.}  
\end{framed}  
\end{savenotes}
```

and the present frame has `\footnote`'s from inside a `tabular` and is inside a `savenotes` environment.⁷ Let's test an `amsmath` environment with `\intertext`. As

$$E = mc^2 , \quad (1)$$

was too easy⁸, let's try:

$$a^n + b^n = c^n . \quad (2)$$

And a footnote with some verbatim material⁹.

The last one was coded as:

⁵Notice that as frame extended to the next page, the end of the `savenotes` environment delivered its footnotes only here.

⁶Alternatively a `\savenotes/\spewnotes` pair could have been used.

⁷Here is an issue which has nothing (as I finally figured out) to do with `footnote`, and only indirectly with `LATEX`: if you embed a *full-width* `minipage` (with initial `\noindent`) in any environment not doing `\ignorespacesafterend`, be careful to add a % either immediately after the `\end{minipage}` (or a `\relax` or a `\par`) or after the surrounding environment `\end{foo}` or use `\end{minipage}\end{foo}` else the output may have an extra blank line if the source has a blank line after the `foo` environment. Here is a typical example, with a `tabular` rather:

```
\newenvironment{foo}{}{}  
  
\noindent\begin{tabular}{p{\dimexpr\linewidth-2\tabcolsep\relax}}  
A\dotfill B  
\end{tabular}  
  
C  
  
\begin{foo}  
\noindent\begin{tabular}{p{\dimexpr\linewidth-2\tabcolsep\relax}}  
A\dotfill B  
\end{tabular}  
\end{foo}
```

C

If you try it out you will see an extra blank line in PDF output above the second C. Starting with v0.99 the `\end{savenotes}` emits an `\ignorespacesafterend` which avoids this generic `TEX/LATEX` problem. For good measure there is now an `\ignorespaces` in `\begin{savenotes}`.

⁸There is also $E = h\nu$.

⁹ $\&\$^%\[\] \$$

3 Notes

```
And a footnote with some verbatim material%
\begin{footnote}
  \verb|&$^%\[}\$|
\end{footnote}.
```

Now some use of `\footnotemark10` followed by a `footnotetext` environment. And use of `\footnotemark[99]99` in association with a `footnotetext` environment using the same optional argument [99]. No hyperfootnote link was inserted. And a final footnote, done with `\begin{footnote}[57]57`. There is no problem with the hyperlink, then.

3 Notes

A few items worth of mention:

- the `footnote` package patches the L^AT_EX kernel `\parbox`. **footnotehyper** doesn't (but the code can be found commented-out at the end of the present file).
- the `footnote` package defines a `minipage*` environment which is `minipage` patched by `\makesavenoteenv`, **footnotehyper** doesn't.
- the `footnote` environment from `footnote.sty` does a `\leavevmode\unskip` which **footnotehyper** doesn't: hence if one locates `\begin{footnote}` at start of a line in the L^AT_EX source, one will typically need a % at end of text on previous line to avoid the end-of-line space.
- the `hyperref` package inserts no hyperlink in case of `\footnotemark[N]/\footnotetext[N]`. This is not modified by **footnotehyper**.
- side-note: there is an interference between `hyperref` and `frenchb` regarding the footnote marker when using the syntax `\footnotemark[NUM]`. For the record here is a patch (last tested briefly with `hyperref` 2016/06/24 v6.83q and `frenchb` 2017/01/30 v3.2g):

```
\AtBeginDocument{%
  \let\xfootnotemarkORIFB \xfootnotemark
  \def\xfootnotemarkFB {\leavevmode\unskip\unkern\,,\xfootnotemarkORIFB }%
  \ifHy@hyperfootnotes\ifFBAutoSpaceFootnotes
    \let\xfootnotemark\xfootnotemarkFB
  \fi\fi
}%
```

- some environments typeset multiple times their contents, which causes issues; **footnotehyper** takes provisions only to handle the `amsmath` measuring step.

¹⁰This one uses the normal footnote counter and the hyperlink works.

⁹⁹`hyperref` creates no hyperlink in this case, or in the `\footnotemark[N]/\footnotetext[N]{<foo>}` case. It does when the [N] is absent or when it is used with a `\footnote` command (or a `footnote` environment.)

By the way, **footnotehyper** v0.9f's `\footnotetext[N]` and `\begin{footnotetext}[N]` each had a bug and they were unusable *inside* the `savenotes` environment. There was no issue *outside*.

⁵⁷

footnotehyper works since v1.0 also in absence of `hyperref` or when the latter was passed `hyperfootnotes=false` option.

3 Notes

- L^AT_EX2e has some “features” when using footnotes in `minipage`'s which are themselves in a `minipage` which may also have footnotes externally to the internal minipages... try it out with some `\fboxes` around the sub-`minipages`, to see.

`footnotehyper` behaves like original package `footnote` when the `savenotes` environment is used *inside* a `minipage`. Only reasonable usage in case of nested `minipages` seems to use only a single top level (i.e. external) `savenotes` environment. But there will anyhow be collisions of the alphabetic enumerations. These collisions are there with or without `footnotehyper` (or `footnote.sty`.) I did not make any attempt, nor intend to in future, to address in an automatized manner these problematic contexts.

4 Implementation

```

1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage{footnotehyper}{%
3 [2019/11/07 v1.1a hyperref aware footnote.sty (JFB)]}
```

no options The package has no options.

```

4 \DeclareOption*{%
5   {\PackageWarning{footnotehyper}{Option `\\CurrentOption' is unknown}}%
6 \ProcessOptions\relax}
```

v1.1a lets the package abort under Beamer class and warn user.

```

7 \@ifclassloaded{beamer}{%
8   {\PackageWarningNoLine{footnotehyper}{This package is
9     incompatible with the beamer class. Aborting input..}}%
10  \endinput}%
11 {}%
```

Versions up to v0.9f loaded `footnote.sty`, with lots of patching afterwards. Starting with v0.99, **footnotehyper** does everything by itself with FNH@ prefix. Brief overview of some of the fixed issues:

- there was incompatibility with `hyperref`,
- and with `color`,
- if the `\@makefntext` at the time of loading of `footnote.sty` does not have its argument visible at top level in its meaning, or is used multiple times there, then the footnote environment will lead to low level TeX error,
- `footnote.sty` modifies `\parbox`,
- `footnote.sty` does some too early `\let`,
- the footnote environment from `footnote.sty` does not work if used with optional argument [N].

Starting with v1.0, **footnotehyper** may be used also in absence of `hyperref`.

36 }%
```

\FNH@hyper@fntext These are the **footnotehyper** replacement for \footnotetext inside the `savenotes` environment. There is a version creating an hyperlink and another one not creating an hyperlink. The \FNH@fntext macro serves as general dispatch. This may be a place to customize if one wants to handle environments doing multiple passes: but the footnote counter must have been taken care of elsewhere. The code currently handles only the case of `amsmath` environments.

```
37 \def\FNH@hyper@fntext{\FNH@fntext\FNH@hyper@fntext@i}%

118 }%

```

\FNH@footnote \FNH@footnotetext We now take care of `footnote.sty`'s `footnote` environment. The original `\fn@endfntext` is lacking a `\fn@endnote`, and this meant that `footnote.sty` was incompatible with `color/xcolor` packages. Also this `\fn@endnote` was `\let` to `\color@endgroup` which is wrong.

Furthermore, independently of presence of the `\color/xcolor` issue, the `footnote.sty`'s `footnote` environment raised an error if used with an optional argument. v0.9f addresses this issue.

The `footnotetext` environment adds a complication, in case of optional argument we should not try to set up a link due to the fact that `hyperref` does not support it for the `\footnotemark[N]/\footnotetext[N]` syntax. And we need to make sure that the `footnote` and `footnotetext` environments obey the `\savenotes/\spewnotes` mechanism.

To handle all of this we code things completely differently from `footnote.sty`.

The v0.9f `\begin{footnotetext}[N]` inside `savenotes` tried to create an `hyperref` target. Fixed for v0.99.

Note: the `footnote.sty` code did a `\leavevmode\unskip` at entrance of `footnote` environment, which **footnotehyper** has not kept.

```

\makesavenoteenv Same as original. Not recommended. Safer to use explicitly `savenotes` environment.

```

217 \def\makesavenoteenv{\@ifnextchar[\FNH@msne@ii\FNH@msne@i]{%

```

Original `footnote.sty` patches `\parbox`, we don't touch it. Also it defines a `minipage*` environment, we don't do it.

```
237 \% \makesavenoteenv[minipage*]{minipage}
```

4 Implementation

```
238 % \let\fn@parbox\parbox
239 % \def\parbox{@ifnextchar[{\fn@parbox{i}{}}{\fn@parbox@ii{}}}
240 % \def\fn@parbox@i#1[#2]{%
241 %   \@ifnextchar[{\fn@parbox@i{#1[#2]}{\fn@parbox@ii{#1[#2]}}}{%
242 % }
243 % \long\def\fn@parbox@ii#1#2#3{\savenotes\fn@parbox#1{#2}{#3}\spewnotes}
244 \endinput
```
